Arris, Arris Mono, Arris Watch

WHERE IT STARTS

Ten figures on a watch face, every corner cut.

Arris began as a watch’s clock figures. It keeps their quirks, the notch in the 2, the waist in the 3, and carries them through a whole alphabet.

The figures at SemiBold with the watch balance (WTCH 100) are the watch’s pixels

Arris

NINE WEIGHTS, MEASURED OPTICS

Arris Italic

CURVES WHERE THE UPRIGHT HAS CHAMFERS; CURSIVE FORMS

Arris Watch

THE WATCH'S OWN STROKE BALANCE

Arris Mono

THE FIGURES' PITCH, PROGRAMMING LIGATURES

Arris Mono Italic

800 EXTRABOLD
Neon rain over Sector 7

900 BLACK
Neon rain over Sector 7

Thin to Black; the steps stay visible at Thin, the openings at Black

wght Weight

GRAD Grade: weight without width

WTCH Watch: the watch's stroke balance

Grade changes weight without moving a glyph; watch moves toward the watch’s balance

INK ON PAPER · GRAD 0

Light text on a dark visor glows and looks heavier. Grade takes weight off without changing a single advance width, so the HUD never reflows.

DARK SCREEN · GRAD 0

Light text on a dark visor glows and looks heavier. Grade takes weight off without changing a single advance width, so the HUD never reflows.

DARK SCREEN · GRAD -50

Light text on a dark visor glows and looks heavier. Grade takes weight off without changing a single advance width, so the HUD never reflows.

The perception study recommends GRAD −50 for dark watch palettes, −25 for transflective screens in daylight

Latin with Extended-A, B and Vietnamese; Cyrillic for some forty languages; Greek

0 1 2 3 4 5 6 7 8 9

THE FLAG, NOTCHED

THE NOTCH

THE WAIST

THE CLIP

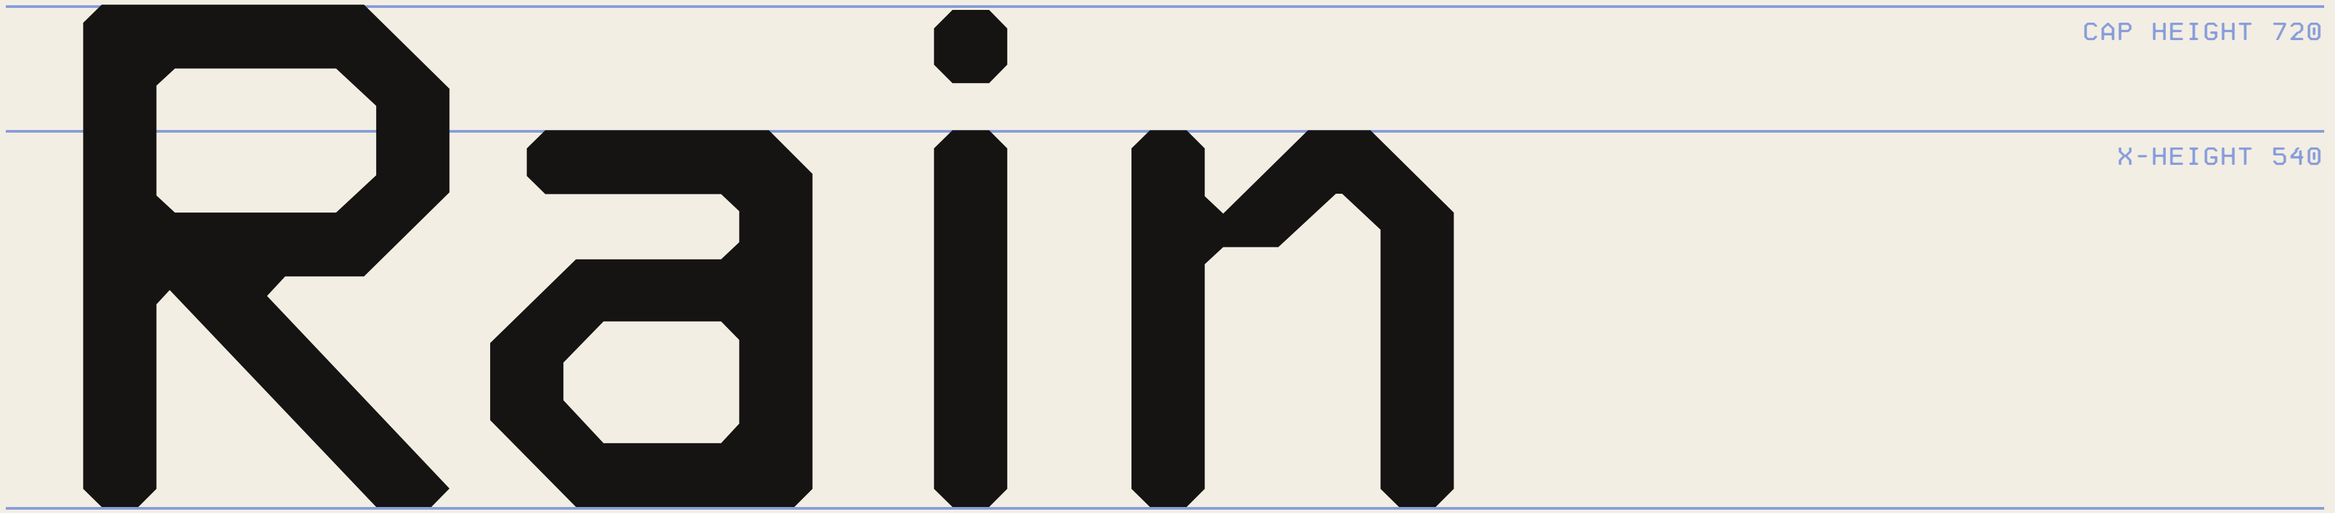
STRAIGHTENED

The quirks stay, at every weight.

Arris Watch SemiBold: the figures as the watch draws them

THE WATCH'S MASTER: 9 × 12 PIXELS, EVERY EXPOSED CORNER CUT

The pixel rule becomes a stroke engine: outer corners cut, crotches filled, at any weight



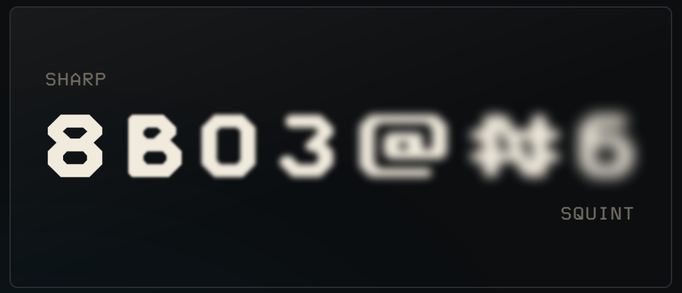
- Chamfered corners: the watch’s pixel rule
- The r’s notch, carried into n, m, h
- Bowls are octagons

Cap height 0.72 em, x-height 0.54 em

OPTICAL CORRECTIONS · MEASURED, NOT GUESSED

Blur it, and the counters stay.

Every hole and slot is measured under a model squint, a blur five per cent of the cap height wide, and white that would close is opened. Then the two corrections type has always made by eye, made by measurement: letters whose bowls turn at cut corners reach past the lines, and every middle sits a little high.

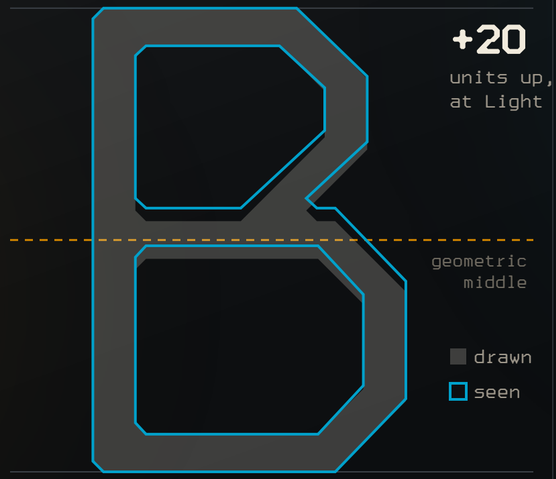


OVERSHOOT

Arris has no curves, but its bowls are octagons: S's top turns down at 45° at both ends, so it holds less ink at the line than H's square-cut stems and looks short. A blur says by how much, and the top reaches past by that.

OPTICAL CENTRE

The eye finds the middle above the middle. Bars rise until the top counter is 0.86 of the bottom one; strokes keep their weight.



OVERSHOOT BY WEIGHT · PER CENT OF THE LINE HEIGHT

MIDDLE RAISED BY WEIGHT · PER CENT OF THE ZONE

Measured in arris.vision and draw.OPTICAL; WTCH 100 keeps the watch's pixel-exact drawing

Cursive, not slanted.

Ten degrees of slant, every chamfer a curve, and forms of its own:
an entry flag, an exit tail, a looped k, a diagonal s.

a a e e f f k k s s y y

Upright and italic, light and medium: a e f k s y

Electric, wired & restless.

ARRIS BLACK ITALIC
ARRIS THIN ITALIC

60 PX Rain hissed on the maglev rails as the last courier jacked

84 PX Rain hissed on the maglev rails as the last

Arris Regular, 14 to 84 pixels

TRANSIT · NIGHT SHIFT

The rain never stops. Neither do the trains.

Couriers, coders and noodle cooks ride the 03:47 maglev from Arcology 7 to the docks. We rode along to see how.

At a quarter to four the platform at Arcology 7 is busier than the market below it. Couriers in rain shells check their wrists, a vendor folds a cart of steamed buns into a backpack, two students share an umbrella and one pair of earbuds: everyone is waiting for car 34, where the sleep pods start.

The cars are narrow and very clean. Twelve pods fold out of the walls, each with a reading light, a charge port and a bottle of water; breakfast is a rice ball and black coffee, delivered at 05:10. Nobody complains about the size. The point, says the conductor, is that you wake up in another district with your data still your own.

> *"You fall asleep under one set of neon and wake up under another. That still feels like magic."*

Demand has outrun supply on most of the network. New cars arrive through next year, and three more night lines open in the spring: the Docks to the Glasshouse, Low Tide to the Spire, and a loop around the ring road. Charge your watch, bring earplugs, and ask for a lower pod.

STATION LIFE · THE GLASSHOUSE

Roses take their time at four hundred kilometres.

In the ring's quietest module a horticulturist and two retired pilots grow the only flowers for a million kilometres. They will not tell you their secret, but they will let you water.

WORDS BY INES VARGA · 14 MIN READ

The Glasshouse is the last stop on the night line, and most riders sleep through it. Those who wake find a long white module, warm as a kitchen, where the air smells of soil for the first time in weeks. Mira Okonkwo has run it for eleven years. She keeps the lights on a twenty-six-hour day, because, she says, roses never agreed to ours.

Everything is weighed. Water comes up from the docks in sealed bladders, 340 litres a week; what the plants breathe out goes back down the line to the scrubbers. The roses are an old French variety, grown from cuttings that flew up in a lunchbox. In low spin they climb slower and their stems come out thick, almost woody, but the flowers open the same deep red.

> **"Up here everything is engineered. The roses are the one thing that still decides for itself."**

Two retired pilots, Hal and Teodor, take the night shift. They prune by headlamp, argue about aphids that cannot possibly exist up here, and sell nothing: every bloom goes to a hospital bed, a launch or a wedding on the ring. If you want one, come and water. Bring your own cup.
